The *Microcystis* cyanobacteria bloom in western Lake Erie has an approximate area of 240 square miles, which is a decrease in area since Aug 15. The bloom extends from Monroe to Marblehead. The area extending offshore near Monroe has expanded. Clouds obscure the area around the Bass Islands but bloom patches are possible. The forecast model projects that low concentrations of surface bloom may approach the Bass Islands by the weekend. The seasonal forecast was issued June 30. No recent toxin data currently available. --Tomlinson 08/20

Current Lake Erie Sentinel-3 A and B composited satellite imagery from the Ocean and Land Color Imager (OLCI) on Aug 19, 2021, showing bloom location and extent in the western basin. Grey indicates clouds or missing data. The estimated threshold of cyanobacteria detection is 20,000 cells/mL. Inset shows a truecolor composite image of the entire lake. Data derived from Copernicus Sentinel-3.

Wind speed and direction from Marblehead, OH. Blooms mix through water column at wind speeds > 15 knots.

Where the bloom is present in western Lake Erie, the potential risk of scum (left), and risk of mixing of the bloom down into the water column every 6 hours over the next 5 days. Mixing is weakest during mild winds.
Forecast surface bloom position for Aug 20, modeled from the last satellite image with water currents estimated from the Lake Erie Operational Forecast System (LEOFS). Potential for bloom movement is forecast in 3-dimensions with a hydrodynamic model using satellite imagery and currents. The modeled output does not contain clouds. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.

Forecast surface bloom position for Aug 25. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.
